

Worksheet: Software Planning and Technical Documentation

Part 1 – Pre-Viewing Discussion

1. In your work, how is software planning usually done?
 2. Do you think planning and documentation slow down or speed up software development? Why?
 3. What is the difference between “*product documentation*” and “*process documentation*” in your opinion?
-

Part 2 – Vocabulary Building

Match the word/phrase to the correct definition.

1. **Elaborate planning**
2. **Endeavour**
3. **Discredited**
4. **Iteration**
5. **Stakeholder**
6. **Architecture**
7. **Roadmap**
8. **Bottleneck**

- a. A person or group who has an interest in the success of a project.
 - b. A plan that shows goals, deadlines, and deliverables.
 - c. Careful, detailed organization before starting a project.
 - d. An obstacle that slows down progress in a process.
 - e. A structured design of how components of a system fit together.
 - f. An attempt to achieve something difficult.
 - g. A stage in a repeated cycle of development.
 - h. No longer respected or believed to be correct.
-

Part 3 – Listening/Reading Comprehension

1. Why was software once compared to construction projects?
2. What were the main problems with the waterfall model?
3. How did the agile manifesto change software development?
4. What two big questions does software documentation answer?

5. Give one example of a **functional requirement** and one of a **non-functional requirement** from the transcript.
 6. What is a **user persona**, and how does it help developers?
 7. What does a **test plan** include?
 8. What are the three types of roadmaps mentioned in the video?
-

Part 4 – Language in Use

Complete the sentences with the correct word from the box.

(endeavour – stakeholders – requirements – visualize – testing – guidelines – roadmap – iteration)

1. Building a successful app is a risky _____.
 2. Clear documentation helps developers translate user needs into _____.
 3. Personas allow the dev team to _____ what the people want and need.
 4. In agile, planning and _____ happen at the same time.
 5. Each _____ helps improve the product step by step.
 6. A release _____ sets strict deadlines for when features go live.
 7. Coding _____ ensure consistency across the team.
 8. Developers must balance the needs of different _____ when building a product.
-

Part 5 – Critical Thinking & Group Task

Work in pairs or small groups.

1. Write **one user story** for a new feature in an app you use often.
 - Use the format: *As a [type of user], I want [goal], so that [benefit].*
 2. Sketch a simple **roadmap** for a small project (for example, launching a new feature or fixing bugs). Include at least 3–4 milestones.
 3. Discuss: In your team, would you prefer to follow detailed documentation (like waterfall) or flexible documentation (like agile)? Why?
-

Part 6 – Reflection (Individual Writing)

Write a short paragraph (5–6 sentences):

- How does documentation help your team “stay on course”?
- What would happen if documentation was ignored?
